Importing and Exporting Datasets – Troubleshooting Guide

Known Issues

1. I am unable to load the dataset using the "LOAD DATA LOCAL INFILE" command what should you do?
   a. This does happens sometimes depending on the exact version of the command you used
   b. Try starting MySQL with `--local-infile flag as shown here -` https://stackoverflow.com/questions/10762239/mysql-enable-load-data-local-infile
   c. LOCAL works only if your server and your client both have been configured to permit it. For example, if mysqld was started with --local-infile=0, LOCAL does not work. See Section 6.1.6, "Security Issues with LOAD DATA LOCAL".
   d. You should set the option: local-infile=1 into your **[mysql]** entry of my.cnf file or call mysql client with the **--local-infile** option:
   e. my.cnf location depends on your operating system so you can find it according to the installation (MySQL Configuration File)
   f. mysql --local-infile -uroot -pyourpwd yourdbname

2. Still unable to load the dataset on Windows, what should I do?
   a. Do not use back slashes in the path (C:\Users\anand\fifa.csv DONT)
   b. Use forward slashes in the path (C:/Users/anand/fifa.csv DO)

3. I am unable to export the SQL table to a CSV. There is an error `ERROR 1290 (HY000): The MySQL server is running with the --secure-file-priv option so it cannot execute this statement`
   a. Do not use back slashes in the path (C:\Users\anand\fifa.csv DONT)
   b. Use forward slashes in the path (C:/Users/anand/fifa.csv DO)
   c. Login into mysql using `mysql --local-infile -uroot -pyourpwd yourdbname`
   d. If still not working - try saving your file to /tmp directory (MacOS)
